

MODERN SOLUTIONS FOR ADVANCED THERAPIES

Myasthenia gravis is a rare chronic disease that weakens an individual's immune system and skeletal muscles. Symptoms fluctuate throughout the day, making it difficult to assess patients consistently and accurately. Signant Health's SmartSignals™ digital solutions help generate reliable evidence for the development of treatments and therapies.

COLLECT PRIMARY ENDPOINTS

Featuring completion windows and timestamps, SmartSignals eCOA solution guarantees data is collected at the times specified by the protocol and will demonstrate the data's integrity. The comprehensive library of questionnaires can help you capture all clinically relevant factors needed.

PREVENT RATING INCONSISTENCIES

Our Rater Training & Qualification solution includes a fully customizable curriculum that standardizes scale knowledge and assessment techniques among raters. Providing targeted trainings and refreshers throughout study, the comprehensive program reduces variability.

MONITOR PATIENTS REMOTELY

Replace the clinic visits that do not require in-person assessments with a convenient video consultation via our Telemedicine solution. You'll not only be able to regularly check in with the immunocompromised patients, but you'll also be able to thoroughly review lab tests and medical images with them.

PROTECT ENDPOINT DATA QUALITY

Signant's PureSignal Analytics safeguards COA data from inconsistent assessments and administration or scoring errors to help optimize signal detection. The solution combines proprietary algorithms with deep expertise of our in-house clinicians to deliver targeted interventions where needed.

GAIN EXPERT GUIDANCE

From designing protocols and enrolling patients to mitigating data issues, Signant's in-house experts will help you navigate common myasthenia gravis challenges from the study's start to closeout.

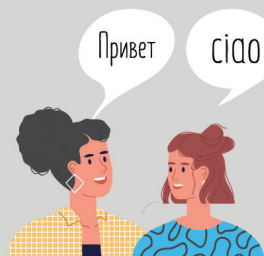

MANAGE VARIOUS CONSENTS

Signant's eConsent ensures each consent and reconsent is completed with the correct IRB- or IEC-approved form. Available in tiered options to fit any study, eConsent uses engaging multimedia to educate patients for a truly informed signature.

At Signant, our SmartSignals solution suite was designed specifically to meet the needs of sponsors, sites, and patients.
