

DELIVER LIFE-IMPROVING TREATMENTS TO PEOPLE LIVING WITH PSORIASIS

Psoriasis is a common autoimmune skin disease affecting 3 million people in the US alone. This chronic condition often negatively impacts the physical, psychosocial, and emotional wellbeing of patients. While there currently is no cure for the condition, today's treatments can help manage symptoms and improve the quality of life for people living with psoriasis. Signant's SmartSignals® digital solutions and team of experts help psoriasis clinical trials generate reliable, high-quality evidence for informed decisions and advanced treatments.

COLLECT ACCURATE DATA

Our customizable eCOA solution accommodates the electronic administration of both at-home patient assessments, such as diaries measuring itch and pain, and on-site validated, disease-specific clinician assessments, such as the Psoriasis Area and Severity Index (PASI) or Psoriasis Epidemiology Screening Tool (PEST). Each assessment or diary entry is stamped with the time and date to prove data was collected within the protocol's desired window.

SAFEGUARD ENDPOINT DATA

Signant's PureSignal Analytics solution uses proprietary algorithms to identify data quality concerns at all relevant levels. Actionable insights enable expert in-house clinicians to analyze and mitigate risks to COA data, in real-time, to drive endpoint data reliability and optimize signal detection.

GAIN OBJECTIVE MEASURES

Objective sleep quality and activity measures can help support your findings during the regulatory process. By integrating Actigraph sensors with our eCOA solution, study teams will gain insights into a psoriasis patient's function and quality of life without burdening patients or sites.

DELIVER TREATMENTS ON TIME

Our Randomization & Trial Supply Management (RTSM) solution ensures the right medication reaches patients at the right time - and with an optimized shelf life. The tool's modern interface provides study teams with key reports for optimal visibility into study KPIs.

STANDARDIZE RATER TRAINING

Our customizable rater training program standardizes the administration of ClinROs, such as the Psoriasis Area and Severity Index (PASI). Designed and implemented by experienced clinician raters, our rater training curriculum standardizes assessment techniques, and establishes scale anchor points to increase the accuracy and reliability of ratings.

At Signant, our SmartSignals solution suite was designed specifically to meet the needs of sponsors, sites, and patients.
