

IMPROVING PSORIATIC ARTHRITIS CLINICAL TRIALS

ONE ENDPOINT AT A TIME

Although therapeutic options have advanced significantly in recent years, approximately half of psoriatic arthritis (PsA) patients achieve only a 20% improvement in clinical trials. **Signant Health can apply decades of direct clinical experience, deep therapeutic-area expertise, and innovative clinical trial technologies** within our SmartSignals® platform to help researchers test and achieve approval for new therapies and treatment options.

COLLECT COMPLETE, ACCURATE ENDPOINT DATA

Protocols for PsA research typically include a combination of ClinRO and PRO assessments or measures. Whether they are administered at site or at home, ensure endpoint data they generate are accurate and reliable by leveraging our flexible, customizable eCOA platform. We'll support your team with clinical and eCOA specialists who understand the nuances of psoriatic arthritis research.

GAIN ADDITIONAL PATIENT FUNCTION INSIGHTS

Sleep quality and activity measures provide relevant, objective insights into PsA patient function and quality of life. Layer ActiGraph into your eCOA strategy to automatically collect sleep and activity data, with no additional burden on patients or sites.

Data can be viewed together with COA data for a more complete assessment of treatment impact or patient function.

Signant Health can apply decades of direct clinical experience, deep therapeutic-area expertise, and innovative clinical trial technologies within our SmartSignals platform to help researchers detect signal while increasing the accuracy and reliability of PsA endpoint data.

LAUNCH PsA STUDIES FASTER

Accelerate the study startup process by obtaining informed consent, enrolling, and randomizing patients faster using SmartSignals RTSM and eConsent Silver solutions. Both are designed for rapid deployment and simplified protocol amendment implementation. Plus, these solutions facilitate decentralized study designs.

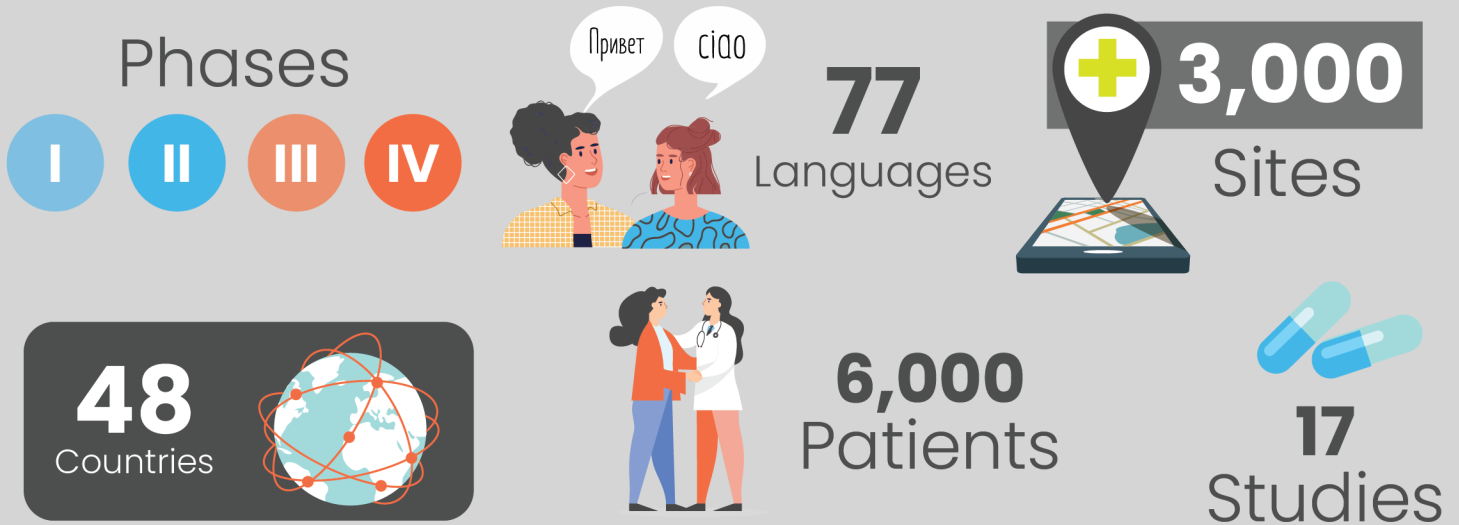

SIMPLIFY LONG TERM FOLLOW UP VISITS

Make it more convenient to participate in your PsA study so patients remain enrolled and compliant with protocol requirements. Video-based telemedicine consultations reduce burdens for participants and offer sites an efficient means of conducting assessments that are suitable for remote conduct.

OPTIMIZE ENDPOINT RELIABILITY

Developed by clinicians for clinicians, our Rater Training solution improves accuracy and consistency in assessment administration and scoring. Another key component of successful PsA studies, PureSignal Analytics proactively addresses quality issues throughout study conduct. Proprietary algorithms examine COA data at all relevant levels to identify data risks that impact endpoint reliability, and in-house clinicians deliver appropriate interventions to correct and prevent issues.

SIGNANT'S PSORIATIC ARTHRITIS CLINICAL TRIAL EXPERIENCE

SMARTSIGNALS SOLUTIONS

The SmartSignals solutions can be used individually or integrated together for a seamless, end-to-end digital experience.

DISCUSS YOUR NEXT STUDY WITH US

Our global team of therapeutic area experts advise on all areas of the clinical development process, including:

- Clinical science and medicine
- Data analysis
- Regulatory
- Operations and trial administration
- Global logistics
